

THERMAL INTEGRATION LTD

USPs

Experience, experience, and more experience.

Continuous product development over 25 years in both thermal storage and plate heat exchange gives us more experience and knowledge than anyone else in our field. Our specialty is control and utilisation of thermal energy in both domestic and district heating environments, rather than just cylinder manufacture or HIU distribution.

Our products are unique in many ways,

protected by numerous patents and allow us to offer solutions no one else can.

We are product impartial.

In other words, our exhaustive range means we won't steer you down the wrong avenue, we won't sell you HIUs where cylinders fit better, and we won't sell you cylinders when a central plant works better

The HEATBANK PANDORA is the simplest high performance mains pressure hot water storage system about. Thousands installed in new-build, where their unique and patented discharge free design allows systems to be installed in minutes rather than hours, and in places other systems simply could not work.

The HEATBANK XCEL range of thermal stores is without a doubt the most versatile multi-fuel system on the market, used in numerous high profile installations and thousands of domestic installations over the years. It is the only thermal store approved by most wood burner manufacturers, and with good reason - its by far the safest and most efficient system around..

Our AMAZON Unvented range generates more hot water per hour than any other unvented cylinder on the market, providing commercial outputs from domestic priced systems. If you can't afford to run out of hot water then look no further.

We are UK partners and distributors of HSF,

the Netherlands' most successful HIU manufacturer, which when combined with our own range allows us to offer the most extensive and efficient range of HIUs on the market. So advanced that the latest UK standards for HIUs found it hard to cope with all our features, but finally we have independent test data to prove our systems do what we say.

UK based manufacturing, training and service backup.

Years of dealing with contractors all over the UK has provided us with an invaluable network of skilled engineers. Not to mention we have the UK's largest renewables training centre, HETAS and BPEC approved courses, covering everything from biomass boilers to district heating and heat metering.

We guarantee results, and never leave a customer without support.
